

# Void Forming Spiral Tubes

Samco Spiral Tubes allow for the safe, quick and economical construction of hollow bodies in hollow plate bridges and ceilings. The dimensional accuracy, tightness and high resistance to deformation of these industrial cavity elements guarantee the implementation of the calculated static values in the structure.

## Advantages

- Maximum available dia. 1,500
- Delivered in every transportable length
- As hollow parts in bridges allow for savings in reinforcement steel and concrete this will result in a considerable weight reduction

## Applications

Column Formers

Pier Liners

Core Slabs

Bridge Construction
